

Our Raschel Knitted Shade Cloth is a technical textile knitted from virgin HDPE tapes. Its construction prevents fraying and tearing when tapes are cut, ensuring lasting resistance for a longer lifetime and a uniform shading over the covered area. Available in a wide range of options according to specific needs, our solutions have been tested for decades and fitted for each application.

## General Characteristics

The composition of our Scaffolding Net delivers a lifetime expected of a product designed and manufactured to the highest quality standards. Marienberg's formulas minimize UV degrading of the polymers, ensuring a higher durability in harsh outdoor conditions against seemingly similar products.

## Main Uses

The Scaffolding Net is intended for closing and protecting buildings during construction or repair work. It prevents pollution to penetrate from and towards the construction site and stops rocks and other elements from dropping or jumping during the task.
